

BF200-BF225 Lower Unit—Sabre™

The new Sabre™ hi-performance lower unit assembly is available for the Honda BF200/BF225 models. The Sabre gearcase has been enhanced to allow for higher engine mounting heights resulting in improved overall performance. The Sabre features a new integrated nose cone that is hydro-dynamically designed to maximize top-end speed, improve acceleration, and eliminate blowout at speeds above 65 mph. To ensure proper cooling to the powerhead, new lower water inlets are incorporated into the design. The Sabre gearcase is available through an exchange program. Contact the Sabre gearcase administrator at Custom Marine and Welding for ordering information.

Low Water Intake Screens

Fits: BF200/225

Low water Intake Screen set used on standard and Sabre™ gear cases. Uses original equipment mounting hardware. Allows the outboard to be run at a higher position while minimizing the top of the exposed screen from drawing air into the cooling system.
